

Executive Summary

PowerCo Churn Analysis

Answer

Use the model as a screening tool and pilot targeted retention actions. Improve churn recall before scaling.

Situation

Churn is ~9.7% of customers. Analysis covered usage, pricing, contracts and customer value.

Complication

Accuracy is 91%, but churn recall is only 9% (F1 = 16%). Most churners are still missed.

Question

Can we improve churn detection and test targeted retention actions—especially around price changes—while measuring retention vs. cost?
